

Environmental Policy

Our company founded in 1992 and since then we are constantly growing and developing considering the new tendencies and demands of the market with the focus on the ecological aspects.

1. The building has a special separation between warehouse and production area.
2. Inside the building we use "high frequency light tubes" in housing with light reflection.
3. Between the warehouse and production area we have installed a "speed door" that opens on demand and closes after a few seconds.
4. In the production area and in the lab the floors are suitable for food, cosmetics and drugs production. Besides this floor is the most comfortable and safe to walk and work on.
5. Doors to the outside of the building and production doors close automatic.
6. Toilets have a water saving button for small flushing that help us have save 25% of water.
7. Our plant is separate to 4 production areas when each has separate shut off / on panel, this reduces energy costs.
8. We have installed a special emergency system for leakages of lotions / chemicals etc. which provides chemicals from entering into environment. Each tank of lotion or chemicals has latent under it that collects any leakage, even in case of exploding of the tank.
9. Paper products used in the process are picked up by a company that recycles them.
10. Floors in the production area in the laboratory are all liquid and chemical proof.
11. Some of the cartons are made of recycled cardboard and recycled in the end.
12. We use pallets in exchange system to minimize transport pollution.
13. We use environmentally sound inks.
14. All the sewage is filtered with fats separator and the sludge is collected by licensed contractor that transport it to licensed site.
15. All the garbage is collected by a contractor to the new site which was built according to Israel environment laws.

Our current policy is to have the least possible pressure on natural resources in our complete organization, to emphasize on recycling and the use of resources as pure as possible.
